

Ideales Resort Green Practices

(Policy since the foundation of Ideales Resort - 2005)

For all of us, the environment is what is most important. In our best efforts to protect it, we have invested and adopted **policies of environmental responsibility**.

Power saving :

- ❖ All **electrical appliances** (except from the fridge) have power supply only when inserting the **card** (attached to the villa key) in the special slot next to the main entrance of the villa. Upon leaving the villa all devices are turned off so as to save energy.
- ❖ All **windows** in the villas are **double glazed** for insulation reducing the consumption of cooling and heating.
- ❖ For **lighting** we only use **energy saving light bulbs** which are recycled after their use. At the main entrance of each villa there are **motion detector lights**. **The air-conditioning system operates only** when the **main door** and all the **windows** are closed.

Water saving :

- ❖ All villas have hot water by **solar water heaters**.
- ❖ In all villas there are **water pressure reducers** and **dual flush cisterns** in all bathrooms.
- ❖ As part of our Green Household, **we change bed linen, towels and pool towels 2 times a week** so as to reduce unnecessary laundry services and the consequent environmental impact (water waste, detergent and energy).
- ❖ Our **eco pool® (Piscines Ideales - the eco pool®)** conforms to all hygiene and safety rules and regulations. Our advanced systems and ecological products, which have replaced the technologies of the past, allow you to enjoy the pool, saving useful resources (i.e. water and energy).
- ❖ The gardens of **Ideales Resort** have **plants** that are very **resistant to weather conditions** and thrive in the region of Kefalonia. They need little watering and provide natural shadow out of the villas. Moreover, there is no lawn that requires huge amounts of water for its maintenance.

Recycling and Waste Reduction :

- ❖ We urge you to **recycle the waste** by using **the specially placed bin** in the kitchen for paper, glass, metal and plastic. All waste generated by **Ideales Resort** is sorted to ensure much of what is thrown away is recycled.
- ❖ We use **compost bins** for organic waste.

ENERGY CONSUMPTION (kWh/gn)

The increase in the consumption of energy and water per guest night is attributed to the sharp decline in the number of our visitors during 2020, due to travel restrictions imposed as a result of the Covid-19 pandemic.

The actual consumption in energy and water was lower by 54% and 36%, respectively.

WATER CONSUMPTION (m3/gn)
